Sample of Scale Plot Plan

Please Follow These Instructions To Complete Your Scaled Plot Plan

1. List the direction of north on the plot plan
2. List what the scale is, (e.g. 1"=20', 1"30', or 1/4"=10', 1/4"=20')
3. Draw all the structures existing and proposed on the site plan to scale.
4. Show location of well and septic.
5. Label all structures existing and proposed.
6. Setbacks are the distances from the closest point of a structure to the lot line. Include those distances on your site plan.
7. Show all streets that border the property.
8. Setback requirements with a scaled plot plan are one and one half times the the normal requirements that would be accepted with a plat of survey. (Example; If zoning requirements for a setback from the rear yard to a structure is 50 feet, it would be 75 feet if you are using a scaled plot. (a plat of survey is a survey done by a Wisconsin Licensed Surveyor.)
9. Show the location of the driveway. This locates the front of the structure for Zoning purposes.
10. **THIS IS THE MINIMUM OF INFORMATION THAT IS REQUIRED.
WITHOUT THIS INFORMATION YOUR APPLICATION WILL BE DENIED
AND LENGTHEN THE TIME IT TAKES TO ISSUE YOUR PERMIT.**
